IDEATION PHASE

Brainstorm & Idea Prioritization

Date	12 February 2026
Team ID	
Project Name	Malaria Detection using Deep Learning
Maximum marks	4

Brainstorm & Idea Prioritization

Brainstorming encourages creative problem solving and idea generation. It helps in listing multiple solutions and prioritizing the most effective ones based on feasibility and impact. The following ideas were generated and prioritized for developing an AI-based malaria detection system.

Step 1: Brainstorming Ideas

Idea No.	Proposed Idea	Description
1	AI-based Image Classification	Use deep learning to detect malaria from blood smear images
2	Web-based Upload System	Allow image upload for instant diagnosis
3	Mobile Application	Enable remote diagnosis via mobile devices
4	Automated Report Generation	Generate instant diagnostic reports
5	Cloud Storage	Secure storage of diagnostic history

Table 1.3 (a) Brainstorming Ideas

Step 2: Idea Evaluation Criteria

Ideas were evaluated based on:

- Feasibility
- Impact
- Cost
- Time of Implementation
- Scalability

Step 3: Idea Prioritization Matrix

Idea	Feasibility (1-5)	Impact (1-5)	Cost (1-5)	Total Score
AI-based Image Classification	5	5	3	13
Web-based Upload System	5	4	2	11
Mobile Application	3	4	4	11
Automated Report Generation	4	3	3	10
Cloud Storage	3	3	4	10
